CHAPTER 1

ABSTRACT

Introduction:

The first handheld cellular mobile phone was demonstrated by John F. Mitchell[2][3] and Martin Cooper of Motorola in 1973, using a handset weighing 2 kilograms (4.4 lbs.1)[4] The first commercial automated cellular network (1G) analog was launched in Japan by Nippon Telegraph and Telephone in 1979. The first version of the GSM (=2G) standard had 6,000 pages. The IEEE and RSE awarded to Thomas Haug and Philippe Dupuis the 2018 James Clerk Maxwell medal for their contributions to the first digital mobile telephone standard.[13] In 2018, the GSM was used by over 5 billion people in over 220 countries. The GSM (2G) has evolved into 3G, 4G and 5G.

The very first time a stored-program computer held a piece of software in electronic memory and executed it successfully, was 11 am 21 June 1948, at the University of Manchester, on the Manchester Baby computer. It was written by Tom Kilburn, and calculated the highest factor of the integer

$2^{18} = 262,144$. Starting with a large trial divisor, it performed division of 262,144 by repeated subtraction then checked if the remainder was zero. If not, it decremented the trial divisor by one and repeated the process. Google released a tribute to the Manchester Baby, celebrating it as the "birth of software". FORTRAN was developed by a team led by John Backus at IBM in the 1950s. The first compiler was released in 1957. The language proved so popular for scientific and technical computing that by 1963 all major manufacturers had implemented or announced FORTRAN for their computers. [17][18]

Android vs iOS	
 Android	 iOS
• Launch in 2008 • Most-used OS in the world • Generally written in Java • Open source • Used on Samsung, LG, Google, Huawei, Nokia, and other devices	• Launch in 2007 • 2nd most-used OS in the world • Generally written in Swift • Closed ecosystem • Used on exclusively Apple devices like iPhone, iPad, and Macbook

Aims and Objectives:

The objective of the study is to analyze the specializations of both Android and IOS.

- To study the features of Smartphone and iPhone.
- To analyze the Security System based on Android and IOS.
- To conclude based on their Smartness on Software.
- To check which is user friendly.

Materials and Methods:

- Total number of individuals to be Studied 254 samples with different age groups.
- Primary data collection was done using questionnaire with about 25 questions through Google forms and Printed Questionnaire.
- Statistical methods were used to derive insights from the data collected.

Conclusion:

“The goal of this survey is to help peoples to choose smartphone when it comes to customization, software ,design of the phone ,user friendliness ,faster performance ,and better operating system” .This study will give the awareness to peoples before they buy a new smartphone. Having a platform to stratify information to peoples according to this survey

Introduction

Android vs iOS: How does the mobile operating system of each impact their security?

Android operating system:

Popularity: The Android operating system is hugely popular. This means that developers are constantly building new apps designed to run on the system. That's good for users ... mostly. The problem comes when hackers create apps designed to infect your mobile devices. There is an app review process for Google Play.

Open source: Android owners can modify the source code of their Android devices. This makes the system a better choice for users who want the flexibility to change the way their mobile devices run. But it can also make Android devices vulnerable to attacks.

Fragmented: Unlike the iOS operating system that only runs on Applebranded products, the Android operating system runs on mobile devices manufactured by a host of companies. Some companies might provide hardware that is more secure than others. Moreover, the manufacturer of the device can use a custom ROM or base operating system that has software installed that cannot be easily removed or analyzed for malicious intent.

Apple's iOS:

More stringent controls: It's more difficult for developers to get apps into the App Store. That's because the review process is more stringent. Because of this, it's less likely for a malicious app to sneak into Apple's store.

Less flexibility: Apple doesn't allow the owners of its devices to modify its iOS operating system or custom ROMs to be loaded on their devices. That makes the system more secure since Apple controls the complete experience. This doesn't stop some owners from "jailbreaking" their Apple mobile devices, modifying their source code on their own. Jailbreaking opens new capabilities on the devices — such as changing digital-assistant Siri's voice, for instance. Be careful if you do this: Apple won't provide support to such devices.

A less tempting target: Because the iOS operating system powers fewer mobile devices, hackers don't target the system as often. This makes sense: Hackers and cybercriminals can ensure more victims if they focus more of their attacks on the more popular Android operating system.

Which Software interface is more user friendly?

Historically, iOS was considered to be a more user-friendly operating system compared to Android. However, it's not true anymore. Both platforms have become extremely polished and easy to use. But, in general, iOS is slightly simpler and more streamlined while Android offers more features to power users.

Pros and Cons of Android vs IOS:

Android Pros and Cons Pros:

1. A wide variety of phones to choose.
2. Most phones have expandable store.
3. Its open source, so it is easy to customize.

Cons:

1. More susceptible to malware.
2. Unless you buy a phone that is not attached to a carrier, you will find lots of pre-installed (bloatware) apps.

IOS Pros and Cons

Pros:

1. Less chances of malware
2. Curated app store
3. Both hardware and software are controlled by a single company (Apple)

Cons:

1. Walled-garden ecosystem
2. Customization is limited
3. No expandable storage

Need for the Study:

The need for the Study is to Analyze How an individual got addicted to a device in Day to Day life by the device's Brand, Features, Software, Security, etc... and it turned into an "A Third Eye 24x7". Here in this study we have analyzed the specializations of Android and IOS by comparing the mobile operating system of each impact their security, analyzing on the Software interface which is more user friendly, pros and cons of Android and IOS.

LIMITATIONS:

- The limitations of the study is the sample space. As the sample taken is 254, generalisation could not be acquired.
- The questionnaire used for the study comprised of 25 questions, which is very lengthy to answer. Hence, the accuracy of the response cannot be completely taken, that is there may be errors.

CHAPTER-2

RESEARCH METHODOLOGY

DEFINITION:

Methodology simply refers to the methods we use to conduct an investigation.

SYSTEMATIC RESEARCH:

Research is not haphazard. Following the basic principles of science there is some systematic way all research is conducted. Usually this means the researcher approaches a problem from a theoretical perspective they arrive at some question they want to answer which is called a HYPOTHESIS, and then perform a study to answer the question.

NATURALISTIC OBSERVATIONS:

This is the simplest way we study behavior. You simply observe the behavior in its natural's environment. This is frequently informal, usually the first step to allow you to get a better understanding of the behavior which allow further, more in-depth investigation.

CASE STUDY:

This is the gathering of detailed information on a specific individual. It is the technique used by Freud. It is difficult; however, to generalize past the person you are studying.

SURVEYS:

Surveys ask a large number of people questions and are most frequently used to get population's attitudes toward something such as who they are going to vote for; they are only accurate; however, the people survey are representative of the populations as whole.

COLLECTION OF DATA:

The facts and figures which can be numerically measured are studies in statistics. Numerical measures of same characteristic are known as observation and collection of observation is termed as data. Data are collected by individual research workers or by organization through sample survey or experiments, keeping in views the objectives of the study. The data collected may be primary data or secondary data.

PRIMARY DATA:

Primary data means the raw data (data without fabrication or not tailored data) which has just been collected from the source and has not gone any kind of statistical treatment like sorting and tabulation. The term primary data may sometimes be used to refer to first-hand information.

SOURCES OF PRIMARY DATA:

The sources of primary data are primary units such as basic experimental units, individuals, households. Following methods are used to collect data from primary units usually and these methods depend on the nature of the primary unit.

PERSONAL INVESTIGATION:

The researcher conducts the experiment or survey himself/herself and collected data from it. The collected data is generally accurate and reliable. This method of collecting primary data is feasible only in case of small-scale laboratory, field experiments or pilot surveys and is not practicable for large scale experiments and surveys because it takes too much time.

DATA VISUALIZATION TOOLS USED:

BAR CHART:

A bar chart or bar graph is a chart or graph that present categorical data with rectangular bars with heights or lengths proportional to the values that they represent. The bars can be plotted vertically or horizontally. A vertical bar chart is sometimes called a line graph.

BAR CHART IN EXCEL:

“Choose the column chart type and the chart sub-type in the upper left corner (basic bar graph). This chart type creates a vertical bar graph, which excel refers to as a column chart. If you want to create a horizontal bar graph, choose the bar chart type.

PIE CHART:

A pie chart is a type of chart with the shape of pie or circle. It presents the relationship of different parts of the data. One would easily see the biggest of smallest share of the total data, by simply looking at the pie chart.

A pie chart (or a circle chart) is a circular statistical graphic which is divided into slices to illustrate numerical proportion. In a pie chart, the arc length of each slice (and consequently it's central and angle and area) is proportional to the quantity it represents. While it is named for its resemblance to a pie which has been sliced, there are variations on the way it can be presented. The earliest known pie chart is generally credited to William play fair's statistical breviary of 1801.

PIE CHART IN EXCEL:

A pie chart is a way to display percentages of a whole. The entire “pie” represents 100 percent of a whole, while the pie “slices” represents portions of the whole. The size of each slices in proportional to that category's percentage of the pie. Pie charts can be tricky to draw by hand, especially with tricky percentage the whole of the pie is 360 degrees, so drawing presents or 56 presents challenge.

PERCENTAGE:

One of the most frequent ways to represent statistics is by percentage. Per cent simply means “per hundred” and the symbol used to express percentage is %. One per cent (or 1%) is one hundredth of the total or whole and is therefore calculated by dividing the total or whole and is therefore calculated by dividing the total or whole number by 100.

Examples: 1% of 250 = $(1/100)250 = 2.5$

To calculate a given percentage of a number, divide the total number by 100 and then multiple the result by the requested percentage.

THE BASIC FORMULA TO CALCULATE PERCENTAGE IN EXCEL:

$$\text{PART/TOTAL} = \text{PERCENTAGE}$$

If you compare it to the basic math formula for percentage, you will notice that excels percentage formula lacks the *100 part. When calculating a per cent in excel, you do not have to multiple the resulting fraction by 100. Since excel does this automatically when the percentage format is applied to a cell. Find out the percentage of delivered products perform the following steps:

- Enter the formula = c2/b2 in cell D2, and copy it down to as many rows as you need.
- Click the per cent style button (home tab>number group) to display the resulting decimal fractions as percentages.
- Remember to increase the number of decimal places if needed, as explained in percentages.

STATISTICAL ANALYSIS TOOLS USED:

CHI SQUARE:

The chi-square test for independence, also called Pearson's chi-square test or the chi-square test of association, is used to discover if there is a relationship between two categorical variables.

HOW TO DO CHI SQUARE IN SPSS?

- Click on Analyze -> Descriptive Statistics -> Crosstabs
- Drag and drop (at least) one variable into the Row(s) box, and (at least) one into the Column(s) box
- Click on Statistics, and select Chi-square

- Press Continue, and then OK to do the chi square test
- The result will appear in the SPSS output viewer

WHAT IS CORRELATION?

Correlation is a statistical measure that expresses the extent to which two variables are linearly related (meaning they change together at a constant rate). It's a common tool for describing simple relationships without making a statement about cause and effect.

HOW IS CORRELATION MEASURED?

- The sample correlation coefficient, r , quantifies the strength of the relationship. Correlations are also tested for statistical significance.

Formula

$$r = \frac{\sum (x_i - \bar{x})(y_i - \bar{y})}{\sqrt{\sum (x_i - \bar{x})^2 \sum (y_i - \bar{y})^2}}$$

r = Correlation coefficient

X_i = Value of the x-variable in a sample

$\bar{x}$ = Mean of the values of the x-variable

Y_i = Values of the y-variable in a sample

$\bar{y}$ = Mean of the values of the y-variable

WHAT IS THE ANALYSIS OF VARIANCE (ANOVA)?

- Analysis of variance, Or ANOVA, is a statistical method that separates observed variance data into different components to use for additional test.
- A one-way ANOVA is used for three or more groups of data, to gain information about the relationship between the dependent and independent variables.
- If no true variance exists between the groups, the ANOVA F-ratio should equal close to 1.
- The formula for ANOVA is:

$$F = \frac{MST}{MSE} \text{ where}$$

F= ANOVA coefficient

MST=Mean sum of squares due to treatment
squares due to error.

MSE=Mean sum of

QUESTIONNAIRE

1. NAME:

2. AGE GROUP:

- Below 15
- 15-25 •
25-35
- 35-45 •
Above 45

3. CATEGORY:

- School student
- College student
- Work professional
- Retired
- Home maker

4. WHAT KIND OF SMARTPHONE ARE YOU USING CURRENTLY?

- Android
- I phone

5. WHICH ONE DO YOU PREFER:

- Android
- I phone

6. CONSIDERING YOUR COMPLETE EXPERIENCE WITH YOUR
SMARTPHONE HOW LIKELY WOULD YOU BE TO RECOMMEND IT TO A FRIEND OR
COLLEAGUE

- 1

- 2
- 3
- 4
- 5
- 6
- 7
- 8
- 9
- 10

7. WHAT ARE THE FACTORS THAT INFLUENCE THE PURCHASE OF YOUR SMARTPHONE?

Brand logo	Yes	No
Design	Yes	No
Function	Yes	No
Multi language	Yes	No
Features (E.g.4g Networks)	Yes	No
Size and weight	Yes	no
Price	Yes	No

8. HOW USER FRIENDLY IS YOUR SMARTPHONE FOR YOU?

	1	2	3	4	5
Android					
I phone					

9. ARE YOU PLANNING TO UPGRADE YOUR PHONE?

- Yes
- No

10. IF YES, WHAT TYPE OF PHONE DO YOU CHOOSE TO BUY?

- Android
 - I phone
 - Others
11. WHICH SMARTPHONE IS EASIER TO INSTALL SOFTWARE ON?
- Android
 - I phone
12. WHAT TYPE OF SMARTPHONE HAS A BETTER CAMERA QUALITY?
- Android
 - I phone
13. IN YOUR OPINION, WHICH PHONE HAS A BETTER BATTERY LIFE?
- Android
 - I phone
 - Others
14. WHICH SMARTPHONE IS MORE EFFICIENT FOR INTERNAL DISPLAY?
- Android
 - I phone
15. WHEN IT COMES TO SECURITY, WHICH PHONE DO YOU PREFER?
- Android
 - I phone
16. WHAT WOULD YOU PREFER “OPEN SOURCE” (LINUX etc.) Or CLOSED OPERATING SYSTEMS (APPLE IOS)?
- Open source system
 - Closed source system
17. WHICH PHONE WOULD YOU USE FOR VIDEO CALLS OR VIDEO CONFERENCING?

- Android
 - I phone
 - Others
18. WHICH PHONE RELEASES THE TIMELY UPDATES?
- Android
 - I phone
19. IS IT EASY TO FIX A CRASHED PHONE?
- Yes
 - No
20. WHICH TYPE OF PHONE MAKES IT DIFFICULT?
- Android
 - I phone
21. HAVE YOU MIGRATED FROM AN ANDROID SMARTPHONE TO AN IPHONE OR VICE VERSA?
- Yes
 - No
22. HOW WAS YOUR EXPERIENCE ON THE NEW MOBILE?
- Excellent
 - Very good
 - Good
 - Bad
 - Very bad
 - Not applicable
23. WHAT IS THE PURPOSE OF UPGRADING YOUR PHONE?

- Long Run
- Battery life
- Faster performance
- Enhanced security
- Others

24. OVERALL WHICH PHONE IS BETTER LOOKING?

- Android
- iPhone

25. HOW WOULD YOU IMPROVE THE IPHONE AND ANDROID PLEASE SPECIFY:

CHAPTER -3
DATA VISUALISATION-GRAPHS AND CHARTS

**FREQUENCY OF DIFFERENT AGE
GROUPS:**

BELOW 15	4
15-25	216
25-35	23
35-45	4
ABOVE 45	7

The above 3-D pie chart shows the frequency of different age groups

FREQUENCY TABLE OF EXPERIENCE LEVEL

LEVEL	RESPONCES
1	5
2	4
3	10
4	5
5	17
6	14
7	39
8	61
9	40
10	59

The above clustered bar shows that experience level of the respondents

FACTORS THAT INFLUENCE THE PURCHASE OF SMARTPHONE

	YES	NO
BRAND LOGO	181	73
DESIGN	207	47
FUNCTION	227	27
MULTI LANGAUAGE	178	76
SIZE AND WEIGHT	193	61
PRICE	228	26
FEATURES	229	25

The above 3-D clustered column shows that the peoples interest to buy smartphone to various features

WHEN IT COMES TO SECURITY

MOBILE SECURITY ALSO REFERS TO THE MEANS BY WHICH A MOBILE DEVICE CAN AUTHENTICATE

USERS AND PROTECT OR RESTRICT ACCESS. THIS HELPS PEOPLE TO CHOOSE THEM A BEST SMARTPHONE

ANDROID	97
IPHONE	157

INTERPRETATION:

- 97 respondents preferred android for security purpose
- 157 respondents preferred I phone for security purpose

COMMENT:

More people preferred I phone for security purpose. Therefore android should improve security purpose for people's opinion for more get more users.

PURPOSE OF UPGRADING PHONE

LONG RUN	56
FASTER PERFORMANNCE	76
ENHANCED SECURITY	22
BATTERYLIFE	66
OTHER	34

The above diagram shows that the why the people upgrading phone most of the people want faster performance compare to other things

NEW MOBILE EXPERIENCE

EXCELLENT	84
VERY GOOD	84
GOOD	66
VERY BAD	3
NOT APPLICABLE	17

The above diagram shows that the peoples experience with new mobile. 33% people satisfied,1% of people are having problem with their new phone.

USER FRIENDLY SMARTPHONE

	1	2	3	4	5
ANDROID	16	14	50	121	43
IPHONE	24	27	29	27	17

The above diagram shows that the how much user friendly the smartphones are ,therefore the bar shows android is more user friendly

PLANNING TO UPGRADE SMARTPHONE

YES	198
NO	56

The above diagram shows that how many of them are upgrading their smartphone therefore maximum number of respondents are having issue with their phone or unsatisfied with their phone

TIMELY UPDATES

IPHONE	73
ANDROID	181

The above diagram shows that which smartphone releases timely updates therefore, Android releases timely updates to I phone .

CHAPTER 4 ANALYSIS FOR THE STUDY

ONE WAY ANOVA

AGE GROUP VS WHICH ONE DO YOU PREFER?

NULL HYPOTHESIS:

H0: There is no significant difference between the preferences and age group

ALTERNATIVE HYPOTHESIS:

H1: There is significance difference between the preferences and age group

ANOVA

WHICH ONE DO YOU PREFER

	Sum of Squares	Df	Mean Square	F	Sig.
Between Groups	.446	4	.111	.669	.614
Within Groups	41.495		.167		
Total	41.941				

WHICH ONE DO YOU PREFER

	N	Mean	Std. Deviation	Std. Error	95% Confidence Interval for Mean		Minimum	Maximum
					Lower Bound	Upper Bound		
15-25	220	1.20	.401	.027	1.15	1.25	1	2
25-35	20	1.20	.410	.092	1.01	1.39	1	2
35-45	3	1.33	.577	.333	-.10	2.77	1	2
ABOVE45	7	1.29	.488	.184	.83	1.74	1	2
BELOW15	4	1.50	.577	.289	.58	2.42	1	2
Total	254	1.21	.407	.026	1.16	1.26	1	2

CONCLUSION:

The above table gives the result of one way ANOVA without replication analysis. The above table gives the result of one way ANOVA without

replication analysis. The column heads gives the Sources of Variance, Sum of Squares, Degrees of Freedom, Mean Sum of Squares, F-Ratio and Significance. Since the p-value is lesser than the level of significance 0.05, this indicates that the null hypothesis (H0) is rejected. Thus we may conclude that there is a significant difference between the preferences and age group

CHI SQUARE TEST

AGE GROUP VS ARE YOU PLANNING TO UPGRADE YOUR PHONE?

NULL HYPOTHESIS:

H0: There is no significant difference between the age group and planning to upgrade smart phone.

ALTERNATIVE HYPOTHESIS:

H1: There is a significant difference between the age group and planning to upgrade smart phone.

Case Processing Summary

	Cases					
	Valid		Missing		Total	
	N	Percent	N	Percent	N	Percent
AGE GROUP * ARE YOU PLANNING TO UPGRADE YOUR PHONE	254	100.0 %	0	0.0%	254	100.0 %

AGE GROUP * ARE YOU PLANNING TO UPGRADE YOUR PHONE Crosstabulation Count

		ARE YOU PLANNING TO UPGRADE YOUR PHONE		Total
		No	Yes	
AGE GROUP	15-25	47	169	216
	25-35	5	18	23
	35-45	1	3	4
	Above 45	3	4	7
	Below 15	0	4	4
Total		56	198	254

Chi-Square Tests

	Value	df	Asymptotic Significance (2-sided)
Pearson ChiSquare	2.927 ^a	4	.570
Likelihood Ratio	3.528	4	.474
N of Valid Cases	254		

CONCLUSION:

Here the p- value is 0.570 which is greater than 0.05 this indicates that the null hypothesis is rejected. Thus, we may conclude that there is a significant difference between the age group and planning to upgrade smart phone.

CHI SQUARE TEST

CATEGORY VS WHEN IT COMES TO SECURITY, WHICH PHONE DO YOU PREFER?

NULL HYPOTHESIS:

H0: There is no significant difference between security and preferences

ALTERNATIVE HYPOTHESIS:

H1: There is significant difference between security and preferences

Case Processing Summary

	Cases					
	Valid		Missing		Total	
	N	Percent	N	Percent	N	Percent
CATEGORY * WHEN IT COMES TO SECURITY, WHICH PHONE DO YOU PREFER?	254	100.0 %	0	0.0%	254	100.0 %

CATEGORY * WHEN IT COMES TO SECURITY, WHICH PHONE DO YOU PREFER? Crosstabulation Count

		WHEN IT COMES TO SECURITY, WHICH PHONE DO YOU PREFER?		
		Android	I Phone	Total
CATEGORY	College student	70	100	170
	Home maker	2	3	5
	Retired	1	1	2
	School student	4	11	15
	Working professional	20	42	62
	Total	97	157	254

Chi-Square Tests

	Value	df	Asymptotic Significance (2-sided)
Pearson ChiSquare	2.535 ^a	4	.638
Likelihood Ratio	2.591	4	.628
N of Valid Cases	254		

CONCLUSION:

Here the p- value is 0.638 which is greater than 0.05 this indicates that the null hypothesis is rejected. Thus, we may conclude that there is a significant difference between security and preferences

CORRELATION

X=AGE GROUPS

Y=WHAT ARE THE PURPOSE OF USING SMATPHONE 4G NETWORK

Correlations

		AGE GROUP	WHAT ARE THE FACTORS THAT INFLUENCE THE PURCHASE OF YOUR SMARTPHONE? [Features(eg 4g networks)]
AGE GROUP	Pearson Correlation	1	-.037
	Sig. (2-tailed)		.558
	N	254	254
WHAT ARE THE FACTORS THAT INFLUENCE THE PURCHASE OF YOUR SMARTPHONE? [Features(e.g. 4g networks)]	Pearson Correlation	-.037	1
	Sig. (2-tailed)	.558	
	N	254	254

CONCLUSION:

THE RESULTS SHOWS THAT THERE IS NEGATIVE CORRELATION BETWEENM AGE AND PURPOSE OF USING SMARTPHONE

CHAPTER 5

SUMMARY

- 79.1% respondents preferred android for their daily use.
- 20.9 respondents preferred I phone for their daily use.
- 78% respondents wish to change their smartphone.
- 22% respondents were comfortable with their smartphone.
- 61.3% respondents wish to change their phone and want android for their experience.
- 32.6% respondents want to experience iPhone for change over.
- 86.6% respondents preferred android for the software installation.
- 34% respondents preferred iphone for the software installation.
- 68.9% respondents preferred iphone for camera quality.
- Respondents preferred android for camera quality.
- 47.6% respondents feel android is more user friendly compared to iphone.
- 78% respondents wants upgrading features in smartphone.
- 61.8% respondents feels iphone is have more security features compared to android.
- 63.4% respondents preferred open source system android.
- 65% respondents uses android for their video calls.
- 71.3% respondents preferred android releases timely updates.
- 76% respondents wants faster performance in their smartphone.

CONCLUSION

- More number of Individuals has preferred Android is more User Friendly. Therefore we should educate the Individuals about the Software and its Genre's.
- 154 individuals stated that I Phone has more secured IOS.
- 78% of people's wish to Upgrading their phone.
- 80% of the people of the people want faster performance compare to other things.

Although I phone has good features and secured IOS comparatively Android is the more User Friendly, cost effective, It's open source easy to Customize. Many of the Lower and Middle class people of the Nation also few of the Upper class people prefers to buy Android.
